Conclusions

- ▶ Internet has brought new opportunities to academic institutions.
- ▶ Multimedia repositories as fundamental knowledge assets.
- ▶ Subtitles are really needed in these repositories.
- ▶ Most repositories are neither transcribed nor translated.
- ▶ **Cost-effective** transcription and translation of video repositories.

Different Contributions  
to Cost-Effective  
Transcription and  
Translation of Video  
Lectures

J.A. Silvestre Cerdà

- ▶ To propose an approach to explicit length modelling for SMT.
- ▶ To develop efficient audio segmentation systems.
- ▶ To design a system architecture for ASR and SMT integration.
- ▶ To improve adaptation techniques for ASR and SMT.
- ▶ To design recommender systems using speech transcriptions.
- ▶ To evaluate these contributions in real-life scenarios.

Demos

Conclusions

- ▶ Length modelling is a well-known problem.
- ▶ Focus on **explicit** length modelling for SMT.
- ▶ Comparative study on phrase length modelling for SMT.
- ▶ Two novel length models for phrase-based SMT are presented.

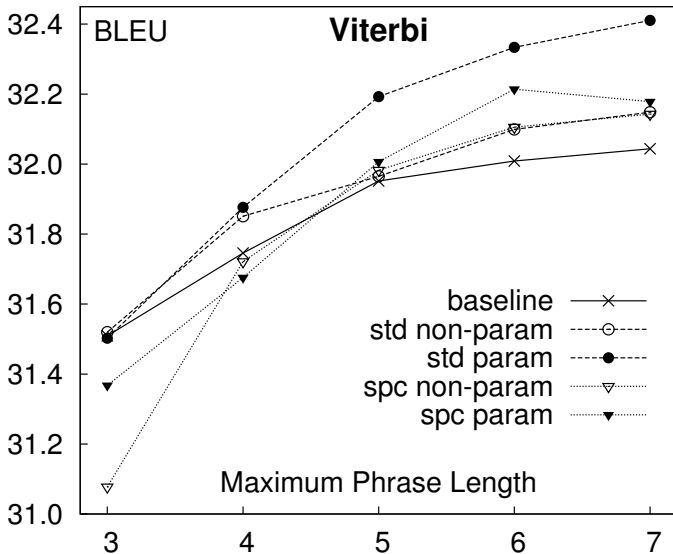

Search the most likely translation  $\hat{y}$ :

$$\begin{aligned}\hat{y} &= \arg \max_y p(y | x) \\ &\approx \arg \max_y \frac{1}{Z(x)} \exp \left( \sum_i \lambda_i f_i(x, y) \right) \\ &= \arg \max_y \sum_i \lambda_i f_i(x, y)\end{aligned}$$

where feature functions  $f_i(x, y)$  are logs of:

- ▶ Phrase-based translation models:  $p(\bar{y} | \bar{x}), p(\bar{x} | \bar{y})$ .
- ▶ Lexical models:  $l(\bar{y} | \bar{x}), l(\bar{x} | \bar{y})$ .
- ▶ Language model:  $p(\bar{y})$ .
- ▶ Reordering models.
- ▶ **Phrase-length models**: std and spc (param/non-param).

- ▶ Two novel phrase-length models for phrase-based SMT.
- ▶ **Statistically significant improvements** on all language pairs.
- ▶ Length models behave differently depending on the task.
- ▶ Trade-off between model complexity and data sparseness.

Conclusions

- ▶ The temporal cost of ASR depends on the input length.
- ▶ Only speech segments should be delivered to ASR systems.
- ▶ A prior segmentation can provide a better transcription quality.
- ▶ A **fast GMM-HMM Audio Segmentation** system is proposed.
- ▶ Albayzin Audio Segmentation Evaluation 2012.

- ▶ AS can be seen as a simplified case of ASR.
- ▶ Reduced set of acoustic classes  $\mathcal{C}$  (i.e. speech, noise, music).
- ▶ Search for a sequence of class labels  $\hat{c}$  so that

$$\begin{aligned}\hat{c} &= \arg \max_{c \in \mathcal{C}^*} p(c | x) \\ &= \arg \max_{c \in \mathcal{C}^*} p(x | c)p(c)\end{aligned}$$

where:

$p(x | c)$  GMM-HMM based acoustic model.  
 $p(c)$   $n$ -gram language model.

- ▶ Albayzin corpus: 111h train, 18h blind test.

	SER			
	Speech	Music	Noise	Overall
<i>test</i>	1.9	36.8	46.5	26.5

- ▶ Real Time Factor (RTF) values close to zero.
- ▶ Final standings for the Albayzin 2012 Competition:

Pos.	System	SER
1	AHOLAB-EHU	26.3
<b>2</b>	<b>MLLP-UPV</b>	<b>26.5</b>
3	GTM-UVIGO	28.1
4	...	> 33

- ▶ MLLP was the fastest among the two best (RTF 0.001 vs 1.6).

- ▶ Simple AS approach based on current ASR technology.
- ▶ **Excellent performance** when detecting speech segments.
- ▶ Improvable results when dealing with noise and music.
- ▶ **Extremely fast** segmentation.
- ▶ Among the best two systems in the Albayzin 2012 Evaluations.

Conclusions

- ▶ System architecture to **integrate ASR and MT** technologies.
- ▶ **Collaborative framework** to review automatic subtitles.
- ▶ Adopted in the EU project **transLectures**.
  1. Improvement of transcription & translation by massive adaptation.
  2. Improvement of transcription & translation by intelligent interaction.
  3. Integration into Opencast to enable real-life evaluation.
- ▶ Focus on the integration with the poliMedia video repository.

- ▶ TLP is the **open source toolkit** implementing the architecture.
- ▶ In production at the UPV's **poliMedia** video lecture repository.
- ▶ Service for the distribution of multimedia educational content.
- ▶ Courses in videos accompanied by time-aligned slides.
- ▶ Statistics of the poliMedia repository (September 2015):

Lectures	15436
Duration (hours)	3079
Avg. Lecture Length (minutes)	12
Speakers	1759
Avg. Lectures per Speaker	8

- ▶ Spanish (88%), English (7%), Catalan (3%), others (2%).

35

- ▶ In M12 (October 2012):
  - ▶ First Spanish (Es) ASR system.
  - ▶ First Es→En MT system.
  - ▶ All Spanish lectures were transcribed and translated into English.
- ▶ In M24 (October 2013):
  - ▶ First Catalan (Ca) and English (En) ASR systems.
  - ▶ First Ca↔Es, Ca↔En and En→Es MT systems.
  - ▶ All poliMedia lectures subtitled in Spanish, English and Catalan.
  - ▶ Any newly recorded lecture was automatically processed in TLP.
- ▶ poliMedia was **re-transcribed** and **re-translated** every 6 months.
- ▶ Platform assesment: automatic and human evaluations.
- ▶ Integration into VideoLectures.NET was similar.

Conclusions

20

35

- ▶ **Docència en Xarxa (DeX)** programme of the UPV.
- ▶ DeX 2013: Post-editing was the preferred reviewing method.
- ▶ DeX 2014:

	Es	Es→En
Lecturers	39	10
Error (%)	12	42
RTF	3	12
RTF from scratch	10	30
Effort red. (%)	<b>70</b>	<b>60</b>

- ▶ System architecture for cost-effective automatic subtitling.
- ▶ Implemented as the open source **transLectures-UPV Platform**.
- ▶ Integration into pM showed **savings up to 2/3 of user effort**.
- ▶ Basis of MLLP's Transcription and Translation Platform (TTP):
  - ▶ More than 200 users (orgs) and 1000 videos (250h) uploaded.
  - ▶ 10 transcription languages and 14 translation pairs.
  - ▶ Support for the EMMA EU project.
  - ▶ Support for the Translation Centre for the Bodies of the EU (CdT).
  - ▶ Support for the SUBurbia EU project.
  - ▶ Under study by many interested organisations.

Conclusions

- ▶ Recommender Systems (RS) are often needed by users.
- ▶ The use of speech transcripts for recommendation was studied.
- ▶ **La Vie PASCAL2 project:**
  - ▶ Main goal was to improve recommendations in VideoLectures.NET.
  - ▶ Baseline RS based on lecture keywords.
  - ▶ New RS based on SVMs and exploiting speech transcripts.

Introduction  
Experiments

Demos

Conclusions

- ▶ ASR performance can be greatly improved using in-domain data:
  - ▶ Lecture slides and related documents, if available.
  - ▶ Metadata such as title, keywords or abstract.
- ▶ LM adaptation by **document retrieval**:
  - ▶ PDF files retrieved from search queries based on lecture titles.
  - ▶ Per-lecture retrieval methods: exact and extended search.
  - ▶ Individual LMs are estimated on each data source separately.

32 **Conclusions**

Main contributions  
Future work  
Publications

- ▶ An explicit phrase-length modelling approach for SMT.
- ▶ A simple segmentation approach for fast speech detection.
- ▶ The transLectures-UPV Platform (TLP) for ASR & MT integration.
- ▶ Integration of TLP into poliMedia (UPV), UC3M, etc.
- ▶ Support for the MLLP's TTP: EMMA, CdT, SUBurbia, etc.
- ▶ A new approach to video lecture recommendation.
- ▶ A new document retrieval technique for LM adaptation.

Conclusions

33 Main contributions  
Future work  
Publications

- ▶ **Explicit length modelling for SMT:**
  - ▶ Perform a full Viterbi-like iterative training method.
  - ▶ Smooth Viterbi counts with extract counts.
  - ▶ Study alternative weight optimisation methods to MERT.
- ▶ **Audio segmentation for speech detection:**
  - ▶ Measure impact on transcription quality in terms of WER.
  - ▶ Adopt a hybrid DNN-HMM approach.
- ▶ **The transLectures-UPV Platform (TLP):**
  - ▶ To extend TLP to give full support to MOOCs.
  - ▶ To explore other applications (i.e. film industry).
- ▶ **Recommender systems for online learning platforms:**
  - ▶ Retrain RS using better speech transcriptions.
  - ▶ Extend the system to provide cross-lingual recommendations.
- ▶ **LM adaptation using external resources:**
  - ▶ Consider also retrieving web pages (HTML).
  - ▶ Adaptation speaker's vocabulary.
